

COBRA

Shape your light

PEOPLE LIGHT OUR WAY

COBRA

Uniquely flexible

Designer **John Ritschl-Lassoudry** was inspired by a dream of glowing snakes in a tropical garden. That very night, he drew his vision of a luminaire with which light can be flexibly shaped. With infinite design possibilities, every installation should be unique.

With the flexible **COBRA**, unique and emotionally appealing lighting atmospheres can be created. Creative lighting design with the extraordinary ceiling and wall surface-mounted luminaire is achieved by continuously moving the profile between freely selectable mounting points. There are almost no limits to creativity.

As the **COBRA** constantly curves away from the wall surface, different light cones are created with each curvature: depending on the distance, these are smaller and more intense or larger and more diffuse.

Wide range of applications

COBRA is suitable for prestigious entrance areas as well as for staircases, corridors, meeting and relaxation zones.

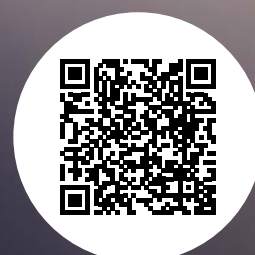

COBRA as basic lighting

The direct/indirect distribution luminaire not only sets decorative accents, but also fulfils the normative requirements for basic lighting.

Wireless control

COBRA is available as DALI version or with MyLights Remote Casambi control.
