

**PURELITE**

Winning design all  
along the line

PEOPLE LIGHT OUR WAY

# PURELITE

## Winning design all along the line

**PURELITE** is unobtrusive yet impressive. Like the golden thread of a captivating story, it runs seamlessly and elegantly through any environment. However, **PURELITE** is far more than just beautiful to look at. The uniquely slim luminaire of only 35 mm in height, including control gear, can be mounted easily and at any time without having to interfere with the statics of the ceiling. Therefore, **PURELITE** is also perfect for retrofitting. The luminaire is available in a variety of versions ranging from channel lighting system to pendant luminaire and thus allows maximum flexibility in planning for any project. **PURELITE** perfectly combines aesthetics and functionality. An adaptive line of pure and neat light. A leitmotif for every room.

### **Pure and seamless beauty**

---

**PURELITE** stands for elegance in every sense of the word. The sleek and purist design fits office spaces and conference rooms just as perfectly as a trendy hotel or your workspace at home. **PURELITE** is a classic. Combined with our innovative diffusers **RUN** and its office-compatible version **RUN+**, it creates a seamless and shadowless line of light of up to incredible 21 meters in length. **PURELITE** unites a graceful appearance and pure light.

### **Flexibility in planning**

---

With only 35 millimetres in height, including control gear, **PURELITE** is the slimmest office luminaire in the industry and enables extraordinary freedom in planning. The ceiling and wall mounted luminaire can be integrated at any time, allowing for late planning or easy retrofitting. In addition, **PURELITE** is equipped with a wireless plug-in system patented by Regent Lighting, enabling particularly simple installation in a compact support profile.

omni-directional light emission

direct light emission

### **Versatility in application**

---

This elegant line of light is available in three different versions, thus covering a wide range of requirements. The two wide-beam versions with ceiling illumination **PURELITE** and **PURELITE OFFICE** are ideal for offices, conference rooms, foyers and corridors. The direct-beam **PURELITE D** and **PURELITE D OFFICE** versions, on the other hand, direct the light downwards only and are perfect to illuminate specific areas. Moreover, the versatile mounting types from recessed ceiling to pendant luminaire allow for creating diverse effects.

### **Countless options thanks to the related PURELITE SLIM product line**

---

**PURELITE SLIM**, the even finer version of our purist line of light, is just as flat as **PURELITE**, but slightly thinner. It is also available in multiple versions and can be used for various applications. It is the perfect addition to **PURELITE** for smaller spaces.

## With integrated **RUN** or **RUN+** diffuser

The new **RUN** and **RUN+** diffusers, specially developed for **PURELITE** and **PURELITE D** as well as for the existing **PURELITE SLIM** and **CHANNEL S** product ranges, create an endless, seamless line of beautiful light without gaps or shadows, and depending on the design, enable centimetre-precision planning up to 24 metres in length.

## The advantages of **RUN+**

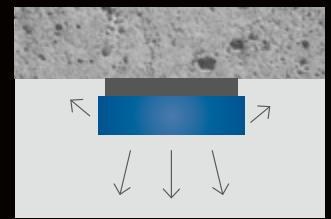

Unlike **RUN**, **RUN+** has been created specifically for the office environment where it meets and passes all standards for workplace lighting. **RUN+** is built around a new technology, designed to delight both architects and electricians. A thin foil which was developed by Regent Lighting and integrated into the diffuser. Aesthetically, we are leaving behind the world of microprismatic plates, and offer an aesthetic alternative with a refined, clear and clean surface. Practically, the **RUN+** diffuser is quick to install, easy to transport and store and enables material savings and thus allows completely flexible lighting design.

## Omni-directional light emission up to 150 lm/W

In the omni-directional versions of **PURELITE** and **PURELITE SLIM**, the indirect light component emphasises the lightness of the flat design. The light glow on the ceiling gives the luminaires a floating impression.

## Direct light emission up to 112 lm/W

The **PURELITE D** and **PURELITE SLIM D** versions guarantee precise directed light. Thanks to a slimline aluminium housing, their design is light and sophisticated.

All models are available as recessed ceiling luminaires and ceiling mounted luminaires, as channel lighting systems and, with the appropriate accessories, also as pendant luminaires.

\*Diffuser **RUN** (or office-compatible diffuser **RUN+**) for continuous, seamless lines of light and, depending on the design, centimetre-precision planning up to 24 metres in length.
